

ESC Minutes 3/29/07

Earth Day:

The annual Earth Day celebration was on Friday April 20 from 11 AM to 3 PM. SEAC was there, as well as the Bio Club. Snow Cones were made and given out for free. There were some informational pamphlets available on programs like the Sierra Club's Campus Climate Challenge. There was also tie-dyeing and recycled planting (using a recyclable container to put plants and soil in). Baked goods were sold to raise money to save some of the rainforest in South America. 37 dollars I believe was the amount raised. There was also a speaker in Memorial Auditorium at noon, Pennsylvania Representative Greg Vitali. Showing April 23 in the CUB at 7 PM is Who Killed the Electric Car. The last major event planned for now is a powerless get together on Wednesday night called "Do It in the Dark," showing that you can still have fun without using any electricity. SEAC was able to get some money from APSCUF to finance Earth Day. The idea of having the new university president and possibly some other officials go rooting through the trash for any recyclable items was brought up at the last meeting, so that is something for the group to pursue.

Solar Scholars seems to be a dead end.

The Bio Diesel processor still needs a site and the program needs more money for a shed and possibly a trailer.
